

Permobil Connect

Your wheelchair just
got smarter.

permobil

It's really cool to see the wheelchair industry becoming more proactive and that Permobil is leading the way.

— Todd Stabelfeldt
Permobil User

Your world, now fully connected

We live in a world where connection is everything. Your chair should be no exception and now features the same level of technology that you've come to expect in your daily life. Connecting users and service technicians through a single intuitive platform improves communication and helps you be better prepared for the unexpected.

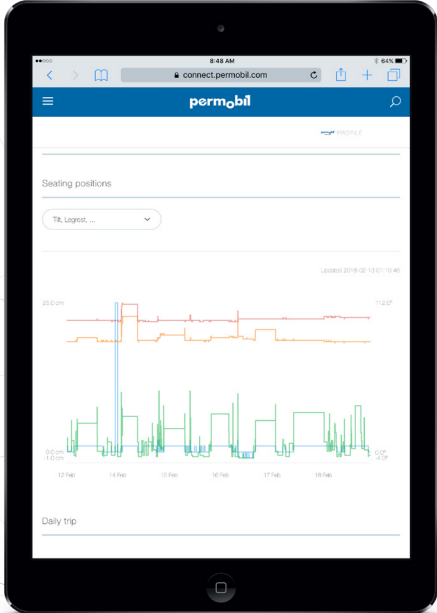

My Permobil Peace of mind

Information is power and Permobil Connect provides essential chair details when and where you need it whether at home or in the community. Quickly view miles traveled, battery charge status and seat function usage to help better plan your day and get the most out of your Permobil*.

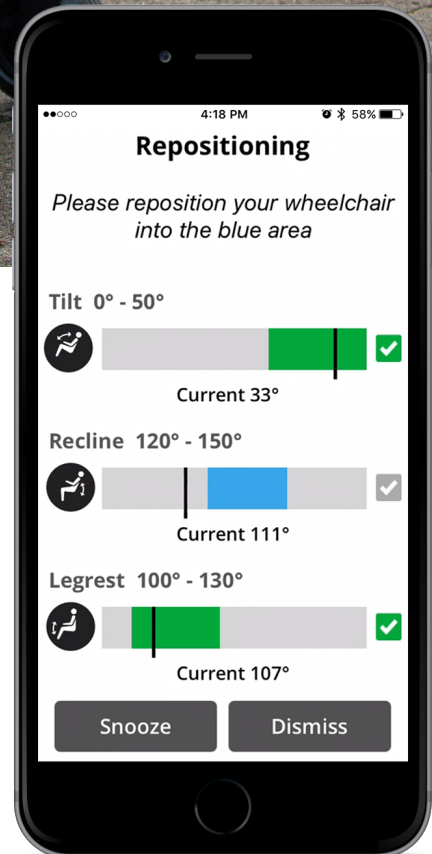

*Available on the M3/M5 and F3/F5 models.

Service Redefined

Permobil connects you to your service provider in ways not previously possible. Your technician is now able to remotely access chair data to help diagnose potential issues so you can focus on living your life. Updates on battery voltage, fault codes, actuator function and current readings are transmitted automatically providing important information on your chair's condition.

Real time seat angles and repositioning reminders

Virtual Seating Coach on board

Virtual Seating Coach connectivity is now built in to every Permobil chair equipped with Connect. You can download the free VSC app and pair with your chair to view seat angles in real time. Knowing what position your seat is in when you complete everyday tasks can add consistency to your daily routines. Work with your healthcare provider to establish customized weight shift regimens to reap the maximum benefits of your powered seat functions through coaching and reminders.
